# Critical raw materials and their supply risk

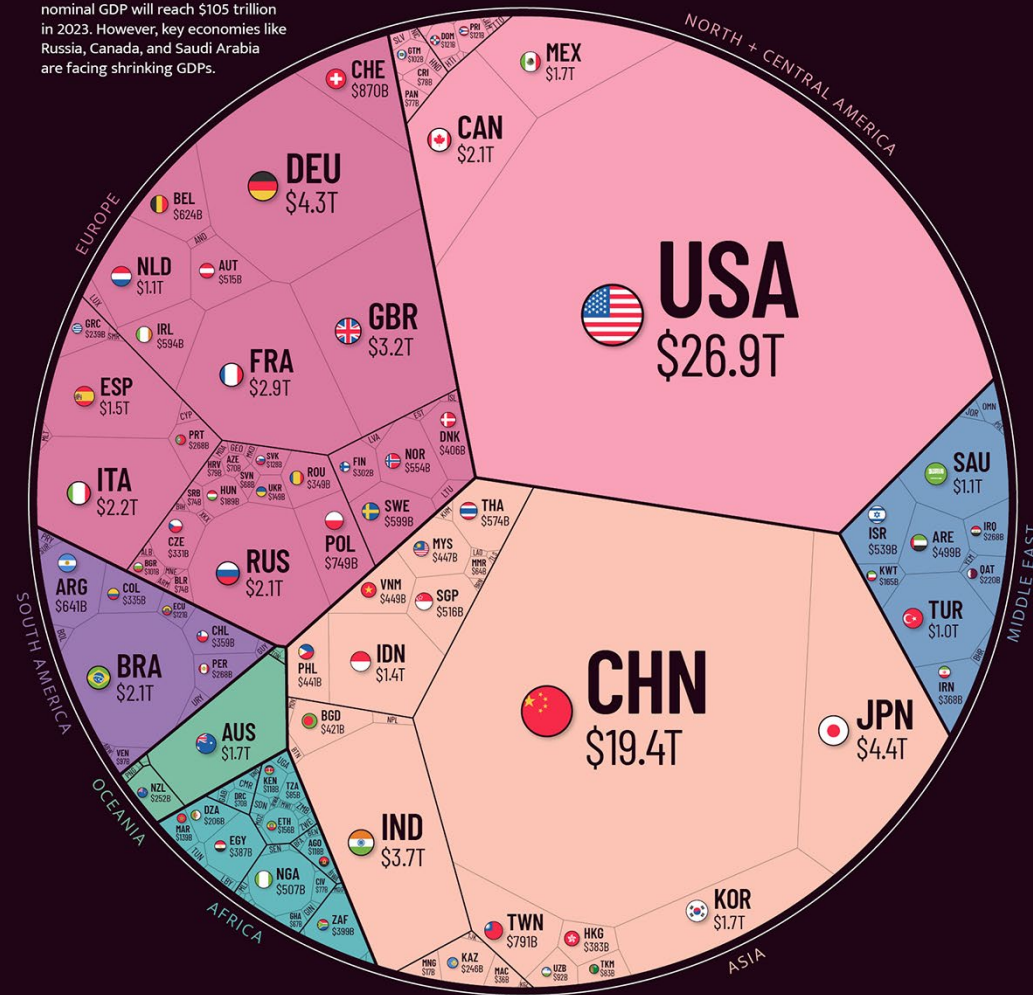

# THE \$105 TRILLION WORLD ECONOMY

2023 GLOBAL GDP

According to IMF projections, global nominal GDP will reach \$105 trillion in 2023. However, key economies like Russia, Canada, and Saudi Arabia are facing shrinking GDPs.

The IMF sees the world economy growing 5.3%, or when adjusted for inflation, 2.8%.

Russia's projected \$150B GDP drop is more than Ukraine's total \$149B GDP.

India dethrones the UK as the 5th largest economy in the world.

China's GDP is expected to grow 7.1% in 2023, ahead of U.S. growth of 5.5%.

# European Union Economy

The chart below shows country-level contribution to the overall economy of the European Union (EU).

The United Kingdom represented about **16%** of the EU's economy when it left in January 2020.

Ireland's GDP **more than doubled** from 2010 to 2020.

Malta is currently the **smallest economy** in the EU, making up about 0.1% of the total.

# 中华人民共和国国家发展和改革委员会

Nationally Determined Contribution (NDC)  
to the UN Framework Convention on Climate Change  
(UNFCCC)

Long-term goals for 2030

- Peak emissions (with best intentions to peak earlier)
- Reduce emission intensity by 60-65% from 2005 levels
- 20% share of renewables in energy-mix

# 第14个五年计划 14th Five-Year-Plan sets out targets for 2035

- Highlights main goals for 2021 to 2025
- Energy and climate indicators are included under “new progress of ecological civilisation”
- Calls for “Establishing a modern energy system”: construction of eight large-scale clean energy “bases”, coastal nuclear power, electricity transmission routes, power system flexibility, oil-and-gas transportation and storage capacity
- 18% reduction target for “CO2 intensity” and 13.5% reduction target for “energy intensity” from 2021 to 2025
- Expanding forest cover from 23.4% (2020 ) to 24.1% of land by 2025
- Increase non-fossil energy from 15.8% (2020) to about 20% by 2025
- Provincial governments to establish peak emission plans by April 2021
- Sector Specific plans will specify in more detail

## Council gives final approval to the net-zero industry act

The Council adopted a regulation on establishing a framework of measures for **strengthening Europe's net-zero technology manufacturing ecosystem**, better known as the 'net-zero industry act'.

These new rules will facilitate the **conditions for investments in green technologies** by:

- simplifying permit granting procedures
- supporting strategic projects, based on specific criteria contributing to decarbonisation
- facilitating access to markets for net-zero technological products
- defining rules for public incentives
- enhancing the skills of the European workforce

The objective is **to cover 40% of the EU's needs** in strategic technology products, such as solar photovoltaic panels, wind turbines, batteries and heat pumps.

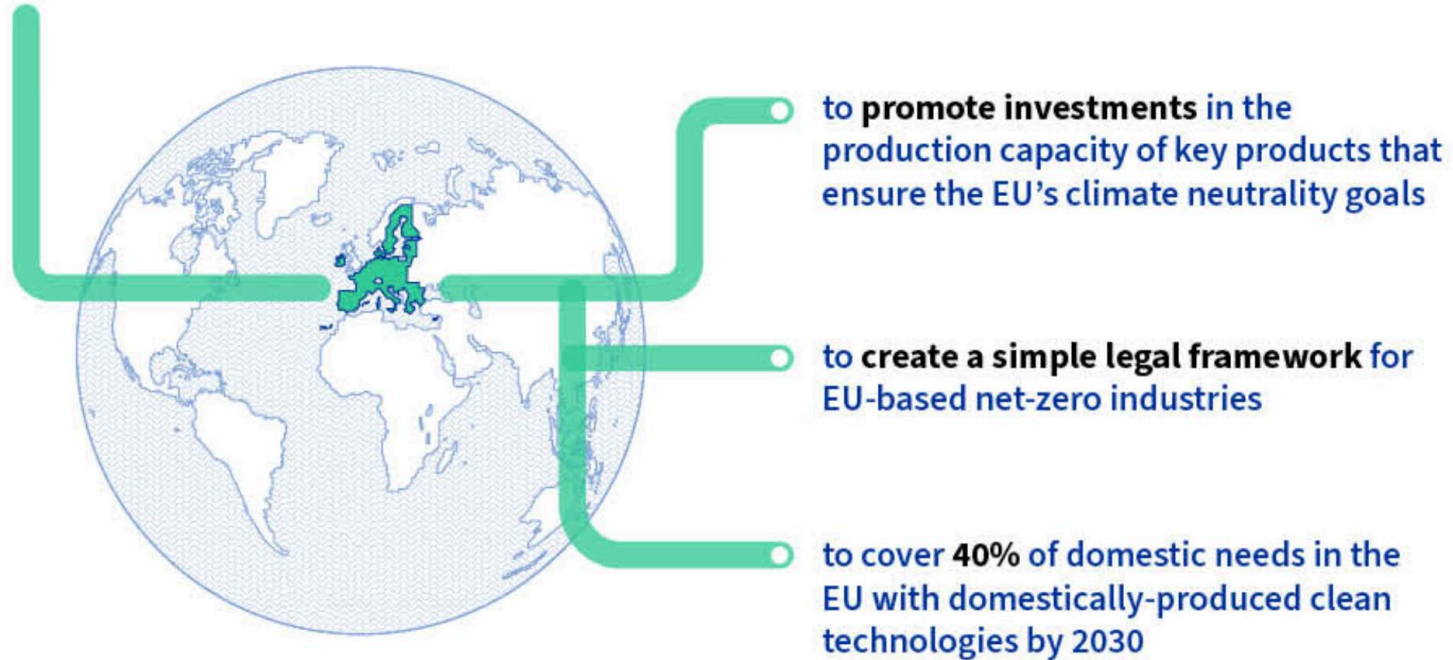

Net-zero industry act: a benchmark for the manufacturing capacity of strategic net-zero technology products (infographic)

## Objectives of the net-zero industry act:

## Solar photovoltaic and solar thermal

by 2025

Objectives of over 320 GW of newly installed solar photovoltaic capacity

by 2030

600 GW

Could deliver:

€60 billion of GDP per year in Europe and 400 000 new jobs

## Heat pumps

million units

by 2030

predictions are that heat pumps will lower Europe's gas demand for heating in buildings by at least 21 billion cubic meters

## Onshore wind and offshore renewables

Capacity will have to grow from 204 GW in 2022 to more than 500 GW in 2030

by 2030

At least 42.5% of renewables

## Biomethane and biogas

In 2021 biogas and biomethane production represented the same amount of natural gas consumption of Belgium, 196TWh

by 2030

EU biomethane production must reach 35 billion (bcm) per year

## Batteries

Collection targets:

- portable batteries targets are 63% in 2027
- batteries from light means of transport, the target are 51% in 2028
- material recovery targets for lithium will be 50% by 2027

by 2030

73%

61%

80%

## CO2 capture and storage (CCS)

CCS is expected to grow to 80 million tonnes of CO2 and reach at least 300 million tonnes in 2040

by 2030

annual injection capacity of at least 50 million tonnes of CO2 in storage sites located in the EU, its exclusive economic zones or on its continental shelf

## Grid technologies

by 2024

77% of EU consumers will have smart meters for electricity and 44% will have one for gas

## GLOBAL MARKET:

The net-zero technology global market is worth about

by 2030

€600 billion

## HOW:

→ faster permit-granting processes to construct, extend change and operate net-zero manufacturing projects

- 12 months for projects of less than 1 GW annually
- 18 months for larger projects
- support from a “one-stop shop”

→ a simple legal framework for EU-based net-zero industries

→ **fostering innovation:** member states will be able to support innovation by creating net-zero regulatory sandboxes

→ **access to markets by** stimulating consumer demand and public procurement

→ **net-zero Europe platform** as a coordination mechanism for discussion, information exchange and sharing of best practices on issues related to this regulation

→ **enhancing skills (skills academies):** developing the skilled workforce and quality jobs required for net-zero industry in Europe

# 2011 Roadmap to a Resource Efficient Europe (COM (2011)571)

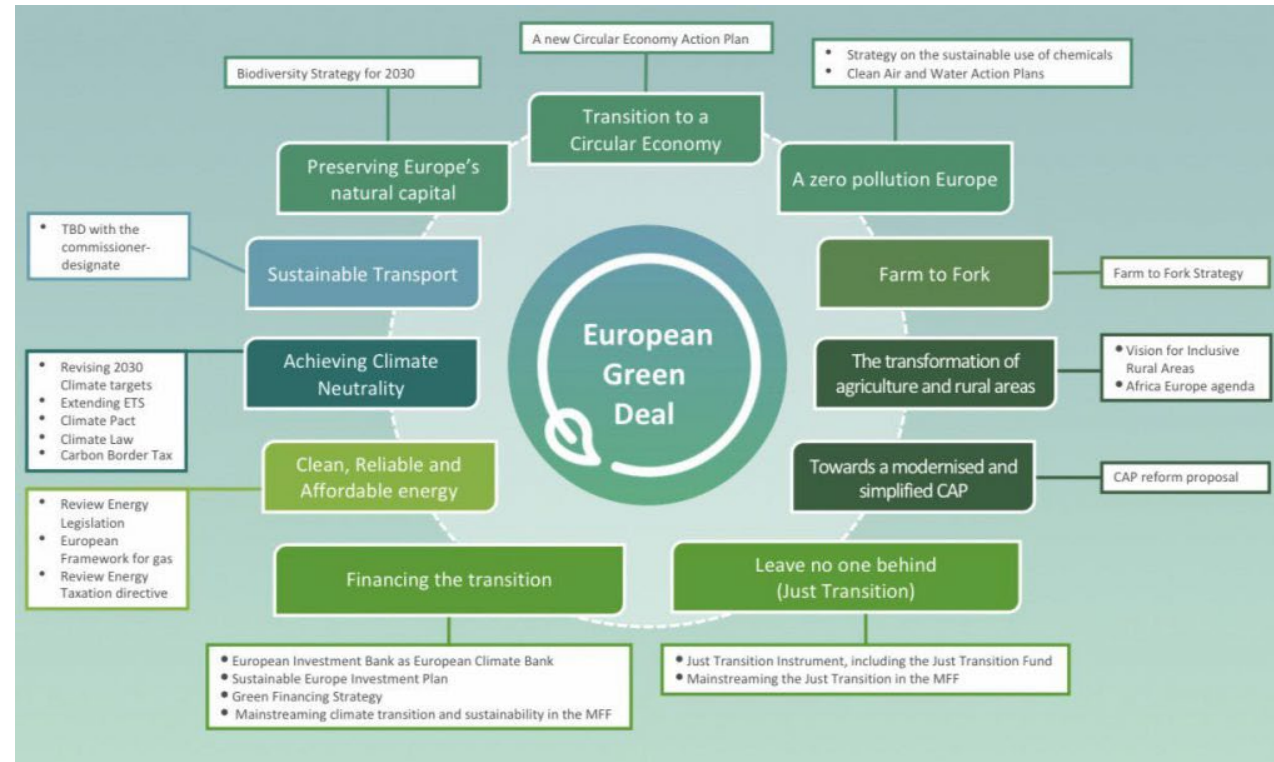

- proposed ways for how Europe can transform into a sustainable economy by 2050 by increasing resource productivity, decoupling economic growth from resource use and its environmental impact, finding ways to tackle inconsistencies in policies and addressing market failures.
- highlighted the need to address pricing to reflect the real costs of resource use and environmental degradation
- sustainable consumption and production
- promoted thinking of waste as a resource and the concept of ecosystem services.

# seventh Environmental Action Program (2013-2020)

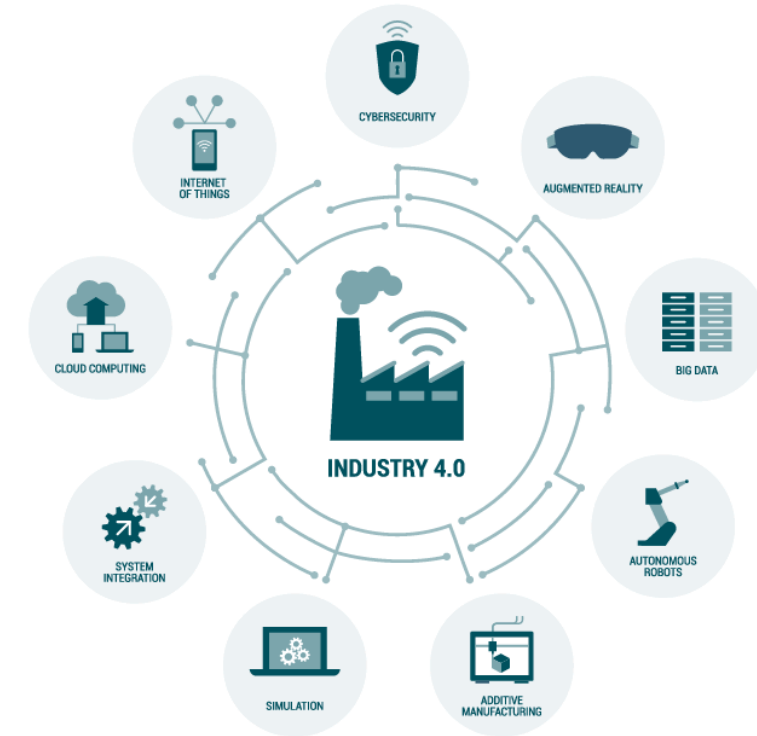

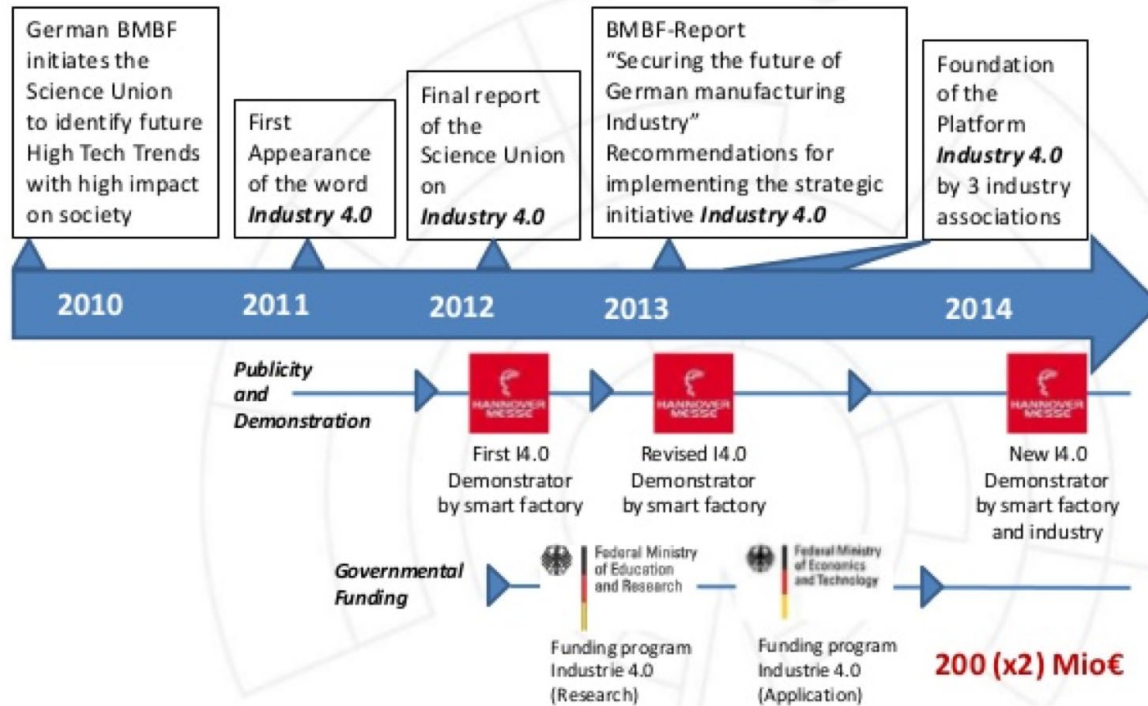

- 1.) protecting, conserving, and enhancing the Union's natural capital,
- 2.) turning the Union into a resource-efficient, green, and competitive low-carbon economy;
- 3.) safeguarding the Union's citizens from environment-related pressures and risks to health and wellbeing;
- 4.) improving implementation of environmental legislation;
- 5.) increasing knowledge about the environment and widening the evidence base for policy;
- 6.) securing investment for environment and climate policy and accounting for the environmental costs of any societal activities;
- 7.) improving the integration of environmental concerns into other policy areas and ensuring coherence when creating new policy;
- 8.) making the Union's cities more sustainable; and
- 9.) helping the Union address international environmental and climate change challenges more effectively

<http://ec.europa.eu/environment/action-programme/>.

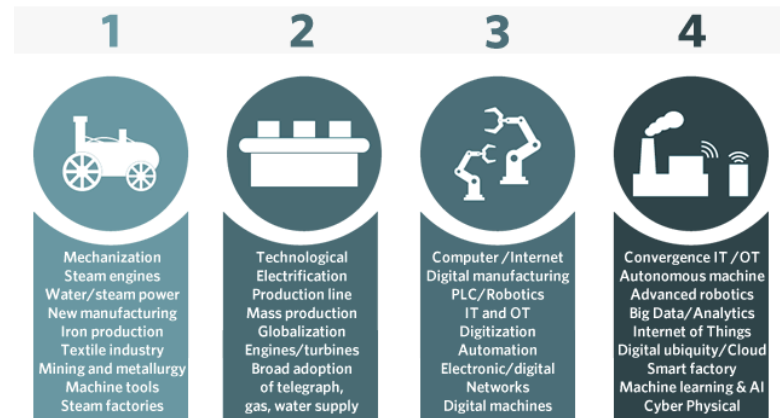

# European Green Deal

### History Industrie 4.0

### FROM INDUSTRY 4.0 TO FOURTH INDUSTRIAL REVOLUTION

# SUSTAINABLE DEVELOPMENT GOALS

# أهداف التنمية المستدامة

# Linear Economy

# Circular Economy

# Circular material flows called for

- Reducing industry emissions will entail coordinated action throughout value chains to promote all mitigation options, including demand management, energy and materials efficiency, circular material flows, as well as abatement technologies and transformational changes in production processes. Progressing towards net zero GHG emissions from industry will be enabled by the adoption of new production processes using low and zero GHG electricity, hydrogen, fuels, and carbon management.

# Circular Economy Package 2015

## Priority Sectors

- Creating synergies between environment and business
- Long-term vision and targets on waste management, internal market rules for products, environment and consumer protection, addressing regulatory obstacles and enforcement issues, innovation and investment

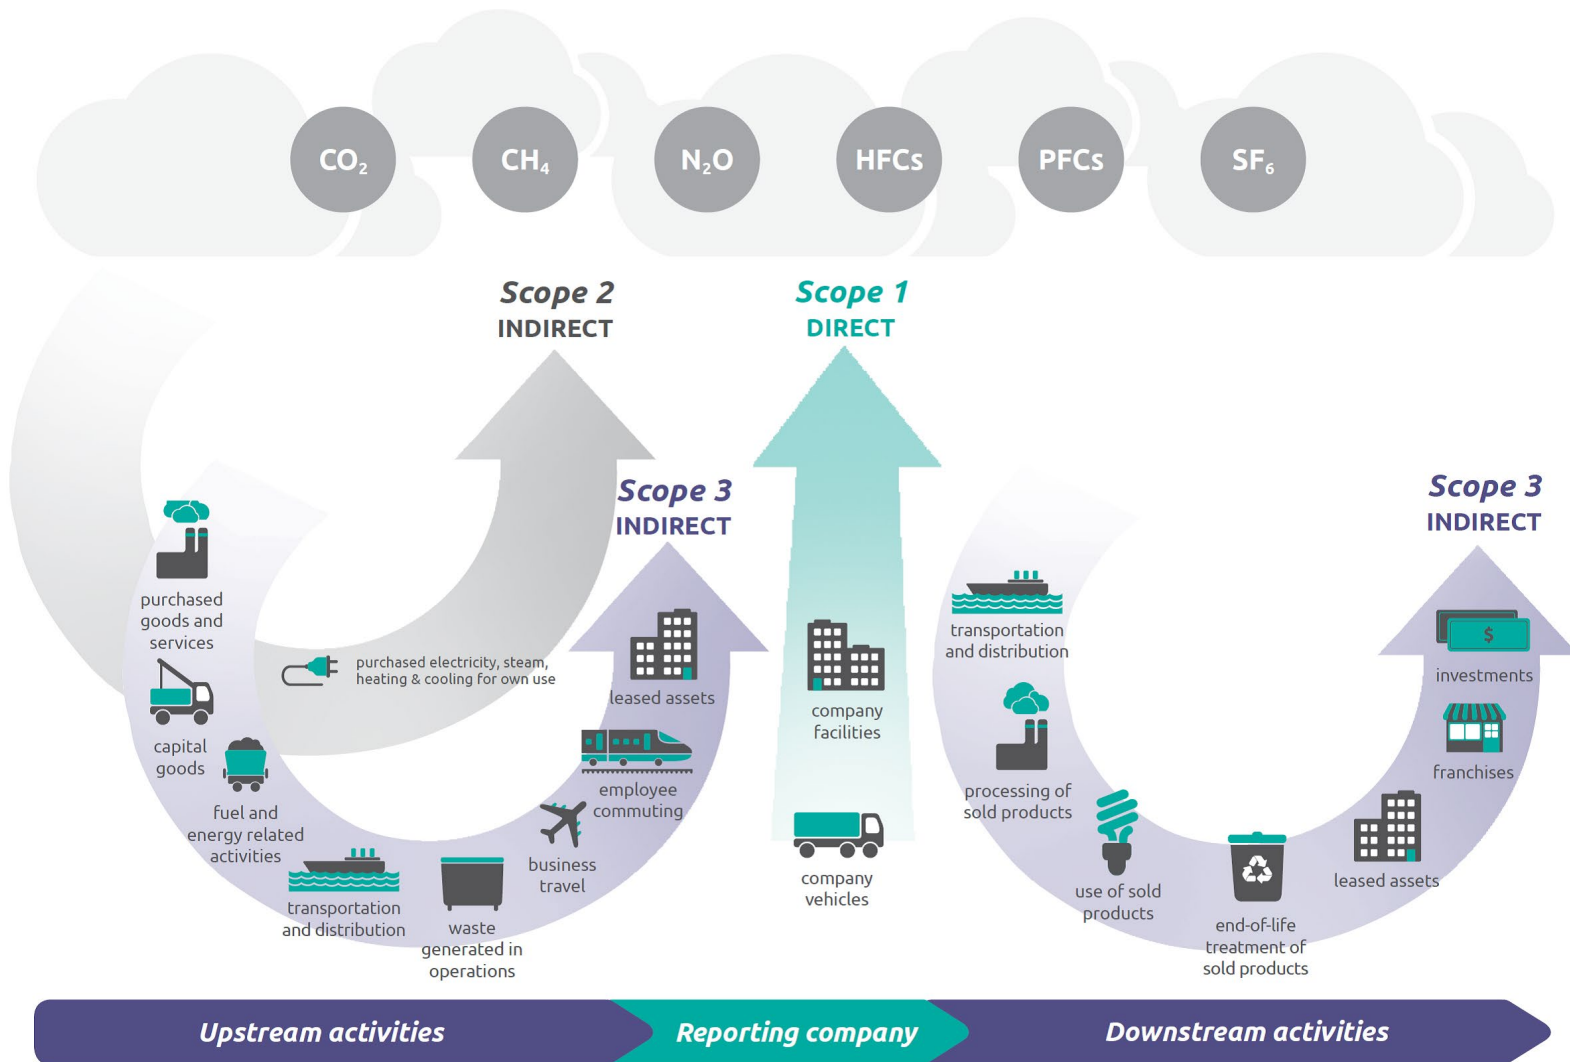

# Circular Economy Package 2022

- make sustainable products the norm in the EU (Sustainable Products Initiative)
- empower consumers and public buyers
- Ecodesign laws 2022-2024
- Textile strategy
- Construction Products regulation

# Corporate Sustainability Reporting

- **DIRECTIVE (EU) 2022/2464 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL**
  - **of 14 December 2022**
- **amending Regulation (EU) No 537/2014, Directive 2004/109/EC, Directive 2006/43/EC and Directive 2013/34/EU, as regards corporate sustainability reporting**
  - **(Text with EEA relevance)**

Source: [WRI/WBCSD Corporate Value Chain \(Scope 3\) Accounting and Reporting Standard \(PDF\)](#), page 5.

# Plastics directive (2019/904)

- introduced a ban starting in 2021 on the most common one-way plastics found on European beaches, including single-use plastic plates and cutlery, cotton buds, straws and stirrers, and expanded polystyrene foam food and drink containers.
- 90 percent of plastic beverage bottles must be collected separately by 2029 and plastic bottles must contain 25% recycled content by 2025 and 30% by 2030.

# Chemical Industry

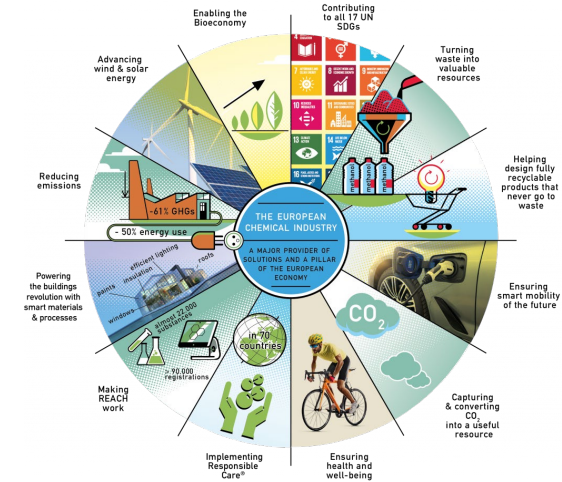

Chemicals supply many strategic value chains

The chemical industry is indispensable to Europe's strong and sustainable economy of the future, as chemicals are present in almost every strategic value chain.

<https://cefic.org/policy-matters/chemical-industry-green-deal/how-can-europes-chemical-industry-help-deliver-on-the-green-deal/>

## EU: SUSTAINABLE CHEMICALS FOR A CIRCULAR ECONOMY

To better understand the extent to which substances of concern are present in products, and to ensure their safe handling by waste operators, companies will from 5 January 2021 have to submit data to a new European Union database managed by the European Chemicals Agency. The database, known as [SCIP](#) (Substances of Concern In Products), was mandated by a [2018 revision of EU waste laws](#).

# Revised Construction Products Regulation

## 1.8. Sustainable use of natural resources of construction works

The construction works and any part of them shall be designed, constructed, used, maintained and demolished in such a way that, throughout their life cycle, the use of natural resources is sustainable and ensures the following:

- (a) use of raw and secondary materials of high environmental sustainability and thus with a low environmental footprint;
- (b) minimizing the overall amount of raw materials used;
- (c) minimizing the overall amount of embodied energy;
- (d) minimizing the overall use of drinking and brown water;
- (e) reuse or recyclability of the construction works, parts of them and their materials after demolition.

## Press release

10-04-2024 - 17:48  
20240408IPR20303

## Parliament gives its final approval to the revised construction products regulation

- Publication of standards to become faster and more efficient.
- All product information to be made available in a single place via Digital Product Passport.
- Inclusion of used construction products to boost reuse and remanufacturing.

<https://ec.europa.eu/docsroom/documents/49315>

**REGULATION (EU) 2023/1542 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL****of 12 July 2023****concerning batteries and waste batteries, amending Directive 2008/98/EC and Regulation (EU) 2019/1020 and repealing Directive 2006/66/EC****(Text with EEA relevance)****THE EUROPEAN PARLIAMENT AND THE COUNCIL OF THE EUROPEAN UNION,**

- Addresses the whole life cycle of batteries (from small household batteries to large vehicle and industrial batteries) from the sourcing of materials and battery design to the treatment of used batteries
- Introduces mandatory requirements on sustainability (such as carbon footprint rules, minimum recycled content, performance and durability criteria), safety and labelling for the marketing and putting into service of batteries, and requirements for end-of-life management.

# EU strategy for sustainable and circular textiles

- **Objectives**

- The strategy aims to create a greener, more competitive sector that is more resistant to global shocks.
- all textile products placed on the EU market are durable, repairable and recyclable, to a great extent made of recycled fibres, free of hazardous substances, produced in respect of social rights and the environment
- "fast fashion is out of fashion" and consumers benefit longer from high quality affordable textiles
- profitable re-use and repair services widely available
- the textiles sector is competitive, resilient and innovative with producers taking responsibility for their products along the value chain with sufficient capacities for recycling and minimal incineration and landfilling

# Ecolabelling

- In 2019, more than 77,000 products carry the EU the Ecolabel, across such categories as hard floor coverings, indoor paints, cleaners, tissue paper, textiles, electronics, and tourist accommodations ([https://ec.europa.eu/environment/ecolabel/images/Evolution\\_nb\\_products\\_services.png](https://ec.europa.eu/environment/ecolabel/images/Evolution_nb_products_services.png)).
- European Commission, “The Ecolabel Catalogue,” <http://ec.europa.eu/ecat>.

# Specific policies

## Plastics

- EU action on plastic production and pollution to contribute to a circular economy.

## Waste and recycling

- EU action on waste management, treatment and recycling.

## Circular economy at the global level

- The EU is leading the way to a circular economy at the global level.

## Critical raw materials

- The EU's action plan on critical raw materials, and list of these materials.

## Industrial emissions

- EU action to reduce industrial emissions.

## Sustainable products

- EU measures to make sustainable products the norm in the EU.

## Textiles

- EU action to address the production and consumption of textiles.

# Tools and instruments

## [EU Ecolabel](#)

- The EU's label of environmental excellence, helping consumers make greener choices.

## [European Circular Economy Stakeholder Platform](#)

- Bringing together stakeholders active in the broad field of the circular economy in Europe.

## [Sustainable buildings – Level\(s\)](#)

- A common European approach to assess and report on the sustainability of buildings.

## [EU Environmental Technology Verification](#)

- Promoting the uptake of green technologies through a verification process.

## [Eco-management and audit scheme](#)

- The EU's management instrument for companies to improve their environmental performance.

## [Green public procurement](#)

- A voluntary instrument to green public purchasing.

## [Raw materials initiative](#)

- The EU's strategy for tackling the issue of access to raw materials in the EU.

## [Eco-innovation action plan](#)

- Eco-innovation and green technologies are key to the circular economy.

## [Circular economy monitoring framework](#)

- Monitor the progress of EU countries towards a circular economy.

## [European Innovation Partnership on Raw Materials](#)

- Bringing together stakeholders on innovative approaches to the challenges related to raw materials.
